Steps to install pre-requisite stuff

1.Install Python

([https://www.python.org/downloads/)](https://www.python.org/downloads/)

Install the python

For Windows User - Setup the Environment variables where the python.exe is located and script folder is located.

We need to set two paths in Environment variable

Where the **python.exe** file is located

Where the **Script** folder is located.

2. Install Selenium Library via command line-

Open Terminal (For Mac –> Type "Terminal" in Spotlight search and hit enter button.,

Open Terminal (For MS windows User- > Press **Win+R**, Type – "cmd" then hit enter button)

Go to the project folder in commandline (

 Write "**pip install selenium"** in command line then wait for the installation done.

3. Install pre-requisite library.

Open Terminal and go to the project folder

Write **pip install lxml** and hit enter

      Note: 1. Suite can take up to 7-8 hours to be executed (Depend on the internet speed).

              2. All the browsers should be up to date.
